--> Comment Text :
Yucca Mountain, NV should NOT be recommended as a site for Nuclear waste. It has been determined that it is geologically unsuitable and seismically unstable eg:volcanic activity, earthquakes. In order for the nuclear waste to get to Yucca Mountain, it would have to be transported from East to West across many states, through many cities, neighborhoods and our richest farmland. Accidents happen. So do acts of terrorism. I live near the Union Pacific rails I44 and I70 - all these corridors would be used to transport this highly radioactive waste. Just last May, a freight train derailed in my town, Webster Groves MO, spilling the contents of 13 coal cars into a prime family neighborhood. How easy it would be for a terrorist to target a nuclear shipment crawling across the rails of our country from east to west, through our neighborhoods, our cities,our rich farmland! Since we have not yet learned how to safely dispose of nuclear waste, let us not compound the problem by moving it to multiple destination
